REST API Reference - v1

Generated from the running application's OpenAPI contract.

Authentication

Use Authorization: Bearer <API_TOKEN> for /api/v1 endpoints. Create, rotate and revoke tokens through the authenticated management UI or authorized token API. Token secrets are returned only when created or rotated.

Authorization scopes

admin.read, admin.write, audit.read, backups.read, collection.read, collection.run, metrics.read, monitoring.read, profiles.read, profiles.write, sources.read, sources.write, tokens.create, tokens.read, tokens.revoke, tokens.rotate

Important operational limitations

Collection history currently returns HTTP 503 until a trusted worker history source is integrated. The backups endpoint exposes monitoring signals, not proof of remote archive integrity. Destructive endpoints require appropriate permissions and may require explicit confirmation.

Endpoints

GET /api/v1/audit/tokens

Audit Tokens

Parameters: limit (query)

Responses: 200 Successful Response, 422 Validation Error

GET /api/v1/auth/tokens

Token Metadata

Responses: 200 Successful Response

POST /api/v1/auth/tokens

Create Api Token

Request body: application/json

Responses: 201 Successful Response, 422 Validation Error

DELETE /api/v1/auth/tokens/{token_id}

Delete Api Token

Parameters: token_id (path)

Responses: 200 Successful Response, 422 Validation Error

POST /api/v1/auth/tokens/{token_id}/revoke

Revoke Api Token

Parameters: token_id (path)

Responses: 200 Successful Response, 422 Validation Error

POST /api/v1/auth/tokens/{token_id}/rotate

Rotate Api Token

Parameters: token_id (path)

Responses: 200 Successful Response, 422 Validation Error

GET /api/v1/backups

Backups

Responses: 200 Successful Response

GET /api/v1/collection

Collection

Responses: 200 Successful Response

GET /api/v1/me

Me

Responses: 200 Successful Response

GET /api/v1/metrics

Metrics

Responses: 200 Successful Response

GET /api/v1/monitoring/health

Health

Responses: 200 Successful Response

GET /api/v1/monitoring/remediation-prompt

Remediation Prompt

Responses: 200 Successful Response

GET /api/v1/monitoring/security

Security

Responses: 200 Successful Response

GET /api/v1/monitoring/vulnerabilities/containers

Container Vulnerabilities

Responses: 200 Successful Response

GET /api/v1/monitoring/vulnerabilities/debian

Debian Vulnerabilities

Responses: 200 Successful Response

GET /api/v1/profiles

Profiles

Responses: 200 Successful Response

POST /api/v1/profiles

Create Profile

Request body: application/json

Responses: 201 Successful Response, 422 Validation Error

DELETE /api/v1/profiles/{slug}

Delete Profile

Parameters: slug (path), confirm (query)

Responses: 200 Successful Response, 422 Validation Error

GET /api/v1/profiles/{slug}

Profile

Parameters: slug (path)

Responses: 200 Successful Response, 422 Validation Error

PATCH /api/v1/profiles/{slug}

Patch Profile

Parameters: slug (path)

Request body: application/json

Responses: 200 Successful Response, 422 Validation Error

GET /api/v1/profiles/{slug}/entities

List Terms

Parameters: slug (path)

Responses: 200 Successful Response, 422 Validation Error

POST /api/v1/profiles/{slug}/entities

Add Term

Parameters: slug (path)

Request body: application/json

Responses: 201 Successful Response, 422 Validation Error

DELETE /api/v1/profiles/{slug}/entities/{value}

Delete Term

Parameters: slug (path), value (path)

Responses: 200 Successful Response, 422 Validation Error

GET /api/v1/profiles/{slug}/keywords

List Terms

Parameters: slug (path)

Responses: 200 Successful Response, 422 Validation Error

POST /api/v1/profiles/{slug}/keywords

Add Term

Parameters: slug (path)

Request body: application/json

Responses: 201 Successful Response, 422 Validation Error

DELETE /api/v1/profiles/{slug}/keywords/{value}

Delete Term

Parameters: slug (path), value (path)

Responses: 200 Successful Response, 422 Validation Error

GET /api/v1/profiles/{slug}/sources

Profile Sources

Parameters: slug (path)

Responses: 200 Successful Response, 422 Validation Error

POST /api/v1/profiles/{slug}/sources

Create Source

Parameters: slug (path)

Request body: application/json

Responses: 201 Successful Response, 422 Validation Error

DELETE /api/v1/profiles/{slug}/sources/{source_id}

Delete Source

Parameters: slug (path), source_id (path)

Responses: 200 Successful Response, 422 Validation Error

GET /api/v1/profiles/{slug}/sources/{source_id}

Get Source

Parameters: slug (path), source_id (path)

Responses: 200 Successful Response, 422 Validation Error

PATCH /api/v1/profiles/{slug}/sources/{source_id}

Patch Source

Parameters: slug (path), source_id (path)

Request body: application/json

Responses: 200 Successful Response, 422 Validation Error

Operational notes

Profile-scoped reads must respect contributor assignments. Administrative operations require administrator privileges. The UI and API share persistent configuration, but collection processing remains a separate worker responsibility. Do not interpret a successful monitoring signal as a tested restore.
